Procurement

Sigma handles hundreds of thousands of pounds worth of aggregated procurement spending for our clients. This enables us to source the best technology in many categories and also negotiate the most competitive prices or leasing options.

Just as importantly, we help you decide which of the latest “must have” technologies is right for you. Our dedicated procurement service has helped many customers by providing impartial advice and technology-independent recommendations.

We can find the right technologies at the right price across all IT areas, including:

- Personal computing: desktops, laptops, PCs and Macs
- Servers and other hardware
- Software
- Networks
- Telecommunications

Once we have identified the right solution for your organisation, Sigma can also arrange favourable leasing options if you want to eliminate up-front capital expenditures.

Sigma has a transparent procurement policy, i.e. for an agreed price, Sigma will source, build, install and configure your equipment – so that your IT procurement costs can be as predictable as your infrastructure support costs.

Third party contract management

As part of the procurement process, we deal with multiple vendors, and we continue to manage these relationships for you after purchase, including upgrades and licence renewals etc. In addition, we can also provide asset management and tracking services.
